

# Medication Reconciliation Post-Discharge

Codes	Description
1111F	Post-Discharge medications reconciled with the current outpatient medication list.

## Codes NOT included in Post-Discharge:

1159F	Medication list documented in the medical record.
1160F	Review of all medications by prescribing practitioner or clinical pharmacist already documented in the medical record.

### Who can complete the medication reconciliation post-discharge?

Medication reconciliation requires the medications on discharge be reconciled with the medications the patient was taking previously. The nurse can obtain these medications, but the physician needs to order any changes, additions, or deletions to the medication. Medication reconciliation and management must be furnished no later than the date of the face-to-face/ telehealth visit.

### Medication Reconciliation can help:

- Address medication errors or duplications
- Educate patients on new medications and potential side effects
- Lower the risk for adverse interactions or **readmissions**

### Documentation in the outpatient medical record **MUST** include:

- Date medication reconciliation was performed
- List of all current medications
- Notation stating that current medication and discharge medication lists were reviewed
- Signature of prescribing care provider, clinical pharmacist or registered nurse who performed medication reconciliation.
- If medications were provided at discharge, please include your patient's next steps such as:
  - Take new medications as prescribed,
  - Discontinue all discharge medications,
  - Or notation if no medications were prescribed at discharge.
